Software Defect Report (SDR)

Online Assessment System (OAS)

Project:	Online Assessment System (OAS)
Component(s) Under Test:	Admin Dashboard, Scheduling, Results Hub, Data Export
Document Version:	1.0
Report Date:	2025-10-30
Test Phase:	System Integration Testing (SIT) / User Acceptance Testing (UAT)
Prepared By:	Weiran Xu
Status:	*Draft*

1.0 Executive Summary

This document provides a detailed log of defects and test incidents identified during the SIT/UAT phase of the Online Assessment System (OAS) build. The test execution revealed several critical and major defects related to data integrity, UI display logic, and core functional workflows.

Key findings include:

- **Data Integrity Failures (High Severity):** The Admin Dashboard incorrectly reports student enrollment and progress metrics. Data export functionalities are omitting critical data sets (e.Accessory: individual criteria).
- **UI/UX & Logic Discrepancies (Medium Severity):** The Scheduling Overview module presents contradictory summary information and suffers from UI element instability.
- **Cosmetic & Labeling Issues (Low Severity):** Several components exhibit ambiguous labeling and layout issues that impede readability.

Immediate triage and defect resolution are recommended, particularly for high-severity items, to be followed by a comprehensive regression test cycle.

2.0 Test Environment

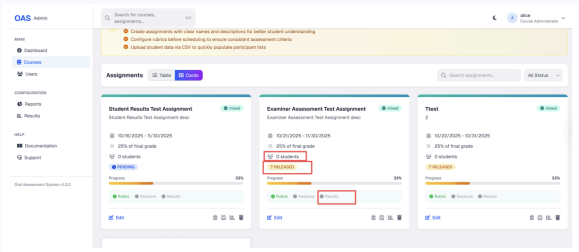

Parameter	Value

Environment:	UAT (User Acceptance Testing)
Application Version:	OAS v1.1.0-ReleaseCandidate
Browser(s) Used:	Google Chrome v108.0.5359, Firefox v107.0
Test Data:	Course: SWEN90018 Final Presentation Demo, Mixed-cohort assignments (individual and group), active sessions, and released results.

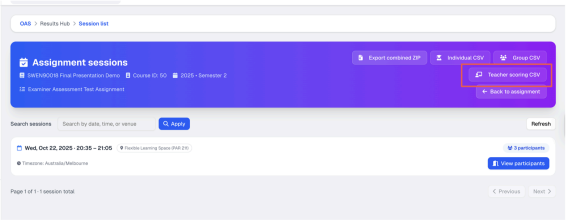

3.0 Detailed Defect / Incident Log

3.1 High Severity Defects

Incident ID	**OAS-DEF-001**
Severity:	**High**
Priority:	**High**
Module:	Dashboard > Course Assignments View (Card UI)
Title:	**Dashboard assignment cards display inaccurate student count and progress percentage.**
Description:	The "Assignments" overview on the main Admin Dashboard incorrectly displays "0 students" and an inaccurate "Progress" percentage (e.g., 33%) for assignments that are confirmed to have active group participation and have been released. This is a critical data misrepresentation on a primary landing page.
Steps to Reproduce:	1. Log in as an Administrator. 2. Navigate to the "Dashboard" and view the "Courses" > "Assignments" section.

	3. Observe an assignment card (e.g., "Examiner Assessment Test Assignment") that has enrolled groups and is marked "RELEASED".
Expected Result:	The assignment card should display the correct, non-zero total number of students enrolled (e.g., "2 Students" if one group of 2 is enrolled) and a progress bar percentage that accurately reflects the state of submissions/grading.
Actual Result:	The card displays "0 students". The progress bar shows a seemingly arbitrary value (e.g., 33%) that does not correlate with the assignment's "RELEASED" status or group participation. This is noted as a potential backend data-fetching or query issue.
Evidence:	

Incident ID	**OAS-DEF-002**
Severity:	**High**
Priority:	**High**
Module:	Results Hub > Assignment Sessions > Data Export
Title:	**"Teacher scoring CSV" export omits all data for individual criteria.**
Description:	When exporting assessment data from the "Assignment sessions" view, the "Teacher

	scoring CSV" function fails to include data related to individual assessment criteria. The resulting file only contains columns and scores for group criteria, leading to an incomplete and unusable data export for mixed-cohort assignments.
Steps to Reproduce:	1. Log in as an Administrator or Staff. 2. Navigate to "Results Hub" > "Session list". 3. Select an assignment (e.g., "Examiner Assessment Test Assignment") that contains both group and individual scoring criteria. 4. Click the "Teacher scoring CSV" export button. 5. Open and inspect the downloaded CSV file.
Expected Result:	The exported CSV file should contain all relevant columns and data for all configured scoring criteria, including both "group criteria" and "individual criteria."
Actual Result:	The exported CSV file is incomplete. It correctly populates group criteria columns but entirely omits all columns and data associated with "individual criteria."
Evidence:	

3.2 Medium Severity Defects

Incident ID	**OAS-DEF-003**
Severity:	**Medium**
Priority:	**Medium**
Module:	Scheduling > Scheduling Overview > Staffing Trend
Title:	**"Staffing Trend" filter controls disappear upon user interaction.**
Description:	In the "Scheduling Overview" module, the legend/filter controls (e.g., "Fully staffed," "Partially staffed," "Unstaffed") located beneath the "Staffing Trend" bar chart are not persistent. When a user clicks on one of the filter items, the entire filter control set disappears from the UI, preventing any further filtering or interaction.
Steps to Reproduce:	1. Navigate to "Scheduling Overview." 2. Scroll to the "Staffing Trend" chart. 3. Click on any of the interactive legend items (e.g., "Fully staffed").
Expected Result:	The chart should update to reflect the filter selection, and the filter controls (legend) should remain visible and interactive.
Actual Result:	The filter controls (and associated empty boxes highlighted in the PDF) disappear from the DOM or are hidden, rendering the filter unusable after the first click.

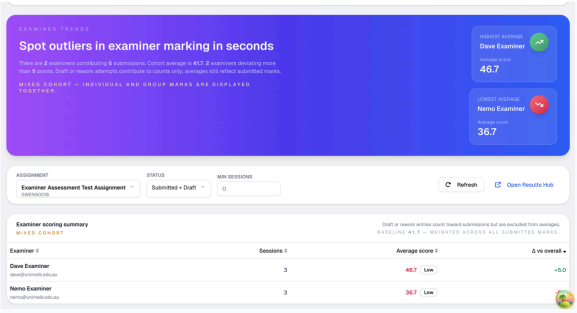

Evidence:	

Incident ID	**OAS-DEF-004**
Severity:	**Medium**
Priority:	**Medium**
Module:	Scheduling > Scheduling Overview > Highlights
Title:	**"Highlights" widget displays factually incorrect summary message.**
Description:	The "Highlights" widget on the "Scheduling Overview" page displays a summary message, "All sessions fully staffed for the selected date," which is factually incorrect. The corresponding calendar view for the same date (e.g., Oct 22) clearly shows that not all sessions are fully staffed (e.g., it indicates "3 sessions" and only "+1 fully staffed"). This indicates a data aggregation or display logic error in the Highlights widget.
Steps to Reproduce:	1. Navigate to "Scheduling Overview." 2. Select a date on the calendar that has multiple sessions, but *not* all are "fully staffed" (e.g., Oct 22). 3. Read the message in the "Highlights"

	widget.
Expected Result:	The "Highlights" widget should display an accurate summary reflecting the data in the calendar view (e.g., "1 of 3 sessions is fully staffed" or "Sessions are partially staffed").
Actual Result:	The widget displays a static or incorrectly calculated message: "All sessions fully staffed for the selected date," which contradicts the source data.
Evidence:	

3.3 Low Severity Defects

Incident ID	**OAS-DEF-005**
Severity:	**Low**
Priority:	**Medium**
Module:	Results Hub > Examiner Trends
Title:	**"Sessions" column label in "Examiner scoring summary" is ambiguous and misleading.**
Description:	In the "Examiner scoring summary" table, the column labeled "Sessions" does not appear to count unique sessions. As per the test notes, the value '3' is displayed because one group with two members received a total of three scores within a

	single session. The column header should be relabeled to reflect what is actually being counted (e.g., "Total Scores" or "Submissions Graded").
Steps to Reproduce:	1. Navigate to "Results Hub" > "Examiner Trends." 2. Observe the "Examiner scoring summary" table for a mixed-cohort assignment. 3. Note the value in the "Sessions" column.
Expected Result:	The "Sessions" column label should be clear and unambiguous, accurately describing the data it represents (e.g., "Total Scores").
Actual Result:	The label "Sessions" is misleading and causes confusion regarding the calculation of examiner workload and activity.
Evidence:	

Incident ID	**OAS-DEF-006**
Severity:	**Low**
Priority:	**Low**
Module:	General UI / Multiple Modules
Title:	**Assignment title component does not handle long strings, causing layout**

	issues.
Description:	UI components used to display assignment names (e.g., in "Mark Consolidation" and "Scheduling Overview") have insufficient width or improper text-handling (wrapping, truncation). Given that assignment names are often long (e.g., "Student Results Test Assignment SWEN90018..."), the text is cramped and difficult to read.
Steps to Reproduce:	1. Create or view an assignment with a long name. 2. Navigate to "Mark Consolidation" or "Scheduling Overview." 3. Observe the display card for that assignment.
Expected Result:	The assignment title should be displayed legibly. The UI container should be wider, or the text should gracefully wrap or truncate with an ellipsis (...).
Actual Result:	The text is cramped, overlaps, or breaks the layout, resulting in poor readability and an unprofessional appearance.
Evidence:	

4.0 Queries & Observations (For Triage)

Query ID	**OAS-QRY-001**
Module:	Results Hub > Examiner Trends
Title:	**Clarification required for "Average score" outlier status logic (e.g., "Low").**
Query:	The "Examiner scoring summary" table displays a status tag (e.g., "Low") next to the "Average score." The business logic for how this outlier status is calculated (e.g., standard deviation from the mean, percentile) is not clear from the UI. **Request:** Provide documentation or a tooltip explaining the calculation for this status tag to allow for proper test verification.

5.0 Conclusion and Recommendations

The test cycle has identified **2 High**, **2 Medium**, and **2 Low** severity defects, along with one query for clarification.

Recommendations:

1. **Immediate Triage:** A defect triage meeting should be convened to address OAS-DEF-001 and OAS-DEF-002 (High Severity) as they represent critical failures in data integrity and functionality.
2. **Backend Investigation:** The root cause of OAS-DEF-001 (Dashboard metrics) and OAS-DEF-002 (Export) is likely in the backend data queries or API.
3. **UI/UX Review:** Defects OAS-DEF-003 (Filter) and OAS-DEF-004 (Highlights) require frontend developer review.
4. **Regression Testing:** A full regression test cycle must be executed post-fix deployment, focusing on the Dashboard, Data Exports, and Scheduling modules.
