Week 11 Report

Name: Haocheng Li
Role(s): Scrum Master, Frontend Developer
Date: May 25, 2025
Project: Oral Assessment System (OAS)
Reporting Period: Week 11 (Monday, May 19, 2025 – Sunday, May 25, 2025)

1. Tasks Completed This Week

Scrum Master Responsibilities:

- **Client Meeting Preparation, Participation & Documentation:** Prepared for, actively participated in, and documented the client meeting held on Friday, May 23, 2025. Key activities included demonstrating the latest prototype updates (including admin, examiner, and student flows, assessment configuration, booking system), discussing implemented changes from mid-term feedback, and gathering detailed refinement requirements from the client (Hasti Samadi) and supervisor (Geela Chee). Ensured all feedback and action items were accurately captured. [Evidence: Week 11 Client Meeting Minutes 23.05.2025]
- **Team Meeting Facilitation (Final Presentation Planning) & Documentation:** Led and facilitated the team meeting on Saturday, May 24, 2025, focused on planning the structure, content, speaker assignments, and timing for the final presentation. Contributed significantly to the slide content discussion and ensured all decisions and action items for slide preparation were documented. [Evidence: Week 11 Team Meeting Minutes 24.05.2025]
- **Final Presentation Speech Conceptualization & Initial Discussion:** Initiated discussions with core presentation team members (Ian Chi, Nemo Xiong, Yanqing Shi) regarding the script and delivery for the 15-minute final presentation. This included conceptualizing a "cosplay role game" approach to create an immersive experience for the audience.

Frontend Developer Responsibilities (UI Prototype Refinements):

- **Admin Comment Library Implementation:** Successfully designed and implemented the "Comment Library" page for Course Administrators. This feature allows administrators to create, view, edit, and manage predefined comments specific to each criterion and performance level within the rubric. This directly addresses client requirements for a centralized comment management system to ensure consistency and efficiency in marking. [Evidence: Github Link for embedded html prototype -]

Documentation:

- **Generative AI Experiment Report Completion:** Completed and finalized the Generative AI experiment report, detailing the use of AI tools in the project, methodologies, findings, and reflections as per academic requirements.

2. Time Allocation (Approximation for Week 10)

Approximately **32.5 hours**, distributed as follows:

- Generative AI Experiment Report: 20 hours
- Client Meeting (Preparation, Attendance, Documentation): 3 hours
- Admin Comment Library Page Implementation: 4 hours
- Team Meeting (Final Presentation Planning - leading, slide contribution, documentation): 5 hours
- Final Presentation Speech Discussion (Initial): 0.5 hours

3. Key Issues Encountered & Resolutions/Mitigation

Coordinating and Preparing for Immersive Final Presentation:

- **Issue:** The team's decision to adopt a "cosplay role game" format for the final presentation, while innovative, requires significant coordination for scriptwriting, role allocation, seamless transitions, and dedicated rehearsal time to ensure a professional and engaging delivery.
- **Resolution/Mitigation:** Initiated early discussions this week with the key speakers to brainstorm the narrative and roles. As Scrum Master, I have emphasized the need for dedicated, intensive practice sessions in the upcoming week. Specific time slots for rehearsals will be blocked out to ensure all presenters are aligned and the delivery is polished.

4.Plan for Next Week (Week 12: May 26 - June 1, 2025) - Final Presentation & Semester Wrap-up

Scrum Master Responsibilities:

- **Final Presentation Rehearsal Leadership:** Organize and lead multiple intensive rehearsal sessions (minimum two full practices) for the 15-minute

"cosplay role game" presentation with Ian Chi, Nemo Xiong, Yanqing Shi, and other assigned speakers to refine delivery, timing, and transitions.

- **Live Demo Coordination & Practice:** Oversee and actively participate in practice sessions for the 8-9 minute live demo component, ensuring it effectively showcases at least three key user stories/flows and runs smoothly.
- **Ongoing Team Support & Impediment Removal:** Continue to provide dedicated support to the team, removing any impediments related to final presentation preparation, documentation finalization, or prototype tweaks.
- **Documentation Oversight & Consolidation:** Ensure all project documentation (including updated PRD, User Stories reflecting final client feedback, and all meeting minutes) is finalized, reviewed, and appropriately archived for the semester handover.
