Q1: What have you done for the project during the week and what have you achieved/delivered individually?

What I have done this week:

First, I attended meetings with the mentor, and team to discuss project direction and clarify detailed work allocation.

Actively contributed to team discussions regarding system design and technique for backend

Backend

SpringBoot 2.7.5

MySQL 8.0.32

Mybatis 2.2.2

Swagger 1.6.14

Redis

Postman

Junit

development.
What's more, I contribute to draft initial user stories based on clarified requirements to support upcoming development work.

			student-course data/relationship from Canvas (CSV)	student-course data in batch to create account (if not exist) for them & add them into courses			
	2.1.2	Non-Registered User (student/examiner/)	I want to receive email notification for registering to the application as a first-time user of OAS system.	So that i can register the OAS application and setting my password by clicking the link in the email	Small	Must Have	
	2.1.3	Registered User (student/examiner/)	I want to receive email notification of i have been added into the specific course.	So that i can be notified that I have added into the course and easily navigate to the course Page in OAS website	Small	Must Have	
	2.2.1	User (student/examiner/admin)	I want to log in securely to the system using password	my data and actions are protected.	Small	Must Have	
	2.2.2	User (student/examiner)	want to log in securely to the system using e-mail verification codes	my data and actions are protected; plus I don't have to remember my password	Small	Must Have	Especially for first-time users
	2.2.3	User (student/examiner/admin)	want to log in securely to the system from Canvas	my data and actions are protected; plus I don't have to remember my password and it's convenient to login in Canvas	Medium	Could Have	Canvas Integration
	2.3	User(student/examiner)	I want to reset my password if forgotten	I can regain access to my account	Small	Must Have	
	2.4	administrator	I want to manage user accounts	so that I can add, modify, or deactivate users as needed.	Medium	Must Have	

What I have achieved/delivered individually:
First, I facilitated requirement clarification sessions that helped align the team on key project goals and priorities and also contributed initial user stories to guide the design and development phases. I also initiated the planning of deployment strategy to ensure early consideration of delivery and maintainability.

Q2: List 2–3 key issues you may have encountered and give reasons if applicable.
The system configuration required for deployment is still unclear. Further research is needed to identify the appropriate deployment environment (e.g., containerization options, database setup, hosting services), which may impact architectural decisions.

Q3: What do you plan to do for the project next week individually?

Plans for next week:
I will draft the system architecture and identifying core modules and technical components. For the development, I will set up the local development environment and coordinate the integration of necessary tools, including AI code assistance tools. For design, I will continue refining user stories based on ongoing requirement discussions. What's more, I will further develop the deployment plan, including researching viable hosting platforms, CI/CD pipelines, and required configurations. Attend regular meetings with the client, mentor, and team to maintain project alignment.
