Week3 Report - Yun Chen

name: Yun Chen
student id: 1412174
Date: 17/8/2025

1. Work Completed

1. This week I completed the backend implementation for Authentication & Authorization and the SuperAdmin APIs for Course Admin management and system-wide, read-only course views. The work includes POST /auth/login (JWT access + refresh tokens) and POST /auth/logout, plus the full SuperAdmin set: invite, list with pagination/filtering/sorting/search, detail, status update, resend invitation, revoke (with optional course transfer), stats (initial version), and email availability check with domain/duplicate validation (400/409). I also delivered GET /superadmin/courses and GET /superadmin/courses/{id}. All privileged endpoints enforce RBAC (SUPER_ADMIN) and return consistent JSON envelopes. Basic local smoke tests (happy paths and key error cases) passed successfully, confirming request/response contracts and input validation. Next steps: broaden automated test coverage, finalise the stats definition, and prepare the services for staging integration. (6h)

2. Attended the weekly meeting, resolved the dispute over the backend programming language, finalized a one-week sprint cycle, and participated in assigning backend development tasks. Held a brief meeting with Casper and Yanqing to discuss the functionality of specific endpoints and define their request/response payloads. (3.5h)

Total : 9.5h

2. Next Week Plan

- **Collaborated with Tianyun to debug the CSV feature across the front-end and back-end.**
- **Fixed some Epic 9 bugs (if identified by the testing team).**
- **Completed the change-password API endpoint.**
