Weekly Report (Week 4)

Ian Chi [1579898]

Q1: Project Contributions and Individual Achievements

This week, I focused on establishing robust project management practices using GitHub Projects. My key contributions include:

- **Project Management Optimisation:** I dedicated time to learning and implementing best practices for project management within the GitHub Projects environment.
- **GitHub Project Configuration:** I successfully configured the GitHub Project, including setting up Kanban boards for Sprint 1 and Sprint 2. This involved defining issue parameters such as size, estimated time, and sprint duration.
- **Issue Management:** I populated the project with relevant issues (tasks), including document requirements, architecture design documents, prototype documents, Epic stories, and user stories, ensuring accurate sizing and tagging. I also established clear relationships between issues, such as linking Epic stories to their corresponding user stories.
- **Team Collaboration:** I facilitated a weekly team meeting with Haocheng for sprint reviews, retrospectives, and planning.
- **Code Review:** I conducted reviews of Pull Requests (PRs) submitted by team members.

Time Allocation: (Total: 8 hours)

- GitHub Projects Best Practices Research: 1.5 hours
- GitHub Project Setup and Issue Management: 4 hours
- Team Meetings: 2 hours
- Pull Request Reviews: 0.5 hours

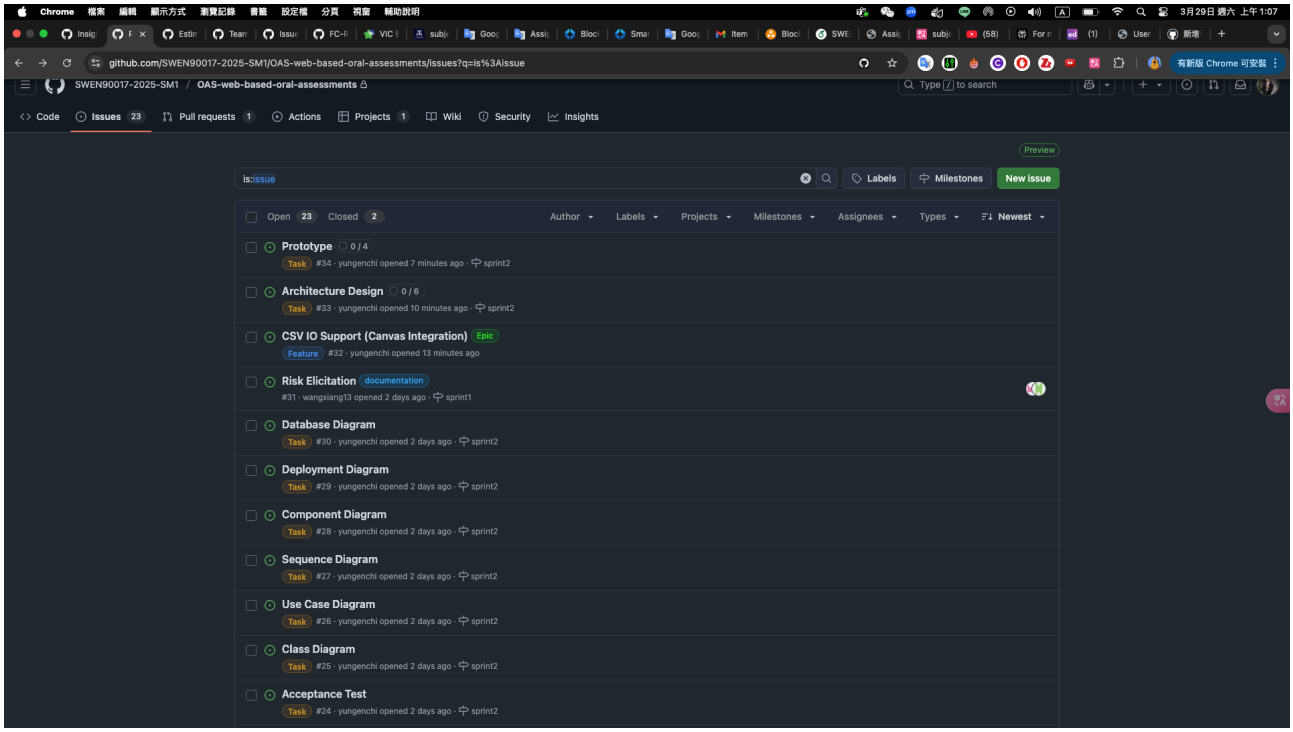

Q2: Challenges Encountered

- I observed limited engagement from some team members during discussions. This lack of active participation could potentially impede collaborative decision-making and project progress.

Q3: Planned Activities for Next Week

- I will collaborate with Haocheng to define the web UI theme and develop a demonstration page.
- I will participate in prototyping activities with the three frontend development team members.
- I will continue to maintain and update the GitHub Project to ensure accurate project tracking and management.
