Week2 Report - Yun Chen

name: Yun Chen
student id: 1412174
Date: 10/8/2025

1. Work Completed

1. Completed the message queue design from last week to handle email sending transactions. However, after further consideration, I realized the previous design was overly complex, so I redesigned it. Now, the message queue is used solely to ensure the reliability of email delivery, and a dead-letter queue listener is implemented to notify the administrator of any emails that failed to send. (3h)
https://github.com/SWEN90017-2025-SM1/OAS-web-based-oral-assessments/commit/cde68ae3c21fd0cff7a66b5d308953149871bcc5

2. Updates the authentication module to use email instead of username for login, aligning the login and logout APIs with the frontend documentation, including unified error codes, response formats, and DTO changes (`LoginRequest{ email, password }`). The authentication flow now queries users by email and validates their status (enabled, locked, deleted). Additionally, a placeholder `SuperAdminController` with secured endpoints (`@PreAuthorize("hasRole('SUPER_ADMIN')")`) for user and role management has been added.
Login identifier changed from `username` to `email`.

3. Attended the weekly meeting, resolved the dispute over the backend programming language, finalized a one-week sprint cycle, and participated in assigning backend development tasks.(2.5h)

Total : 8.5h

2. Next Week Plan

- **Completed all backend tasks in Sprint 1, including Epic 9 and Epic 2.**
- **Supervised and assisted others in completing the backend work for Epic 4.**
- **Conducted integration testing with the frontend.**
