Yunpeng Xiong Weekly Report (Week 4)

> Yunpeng Xiong 1513076

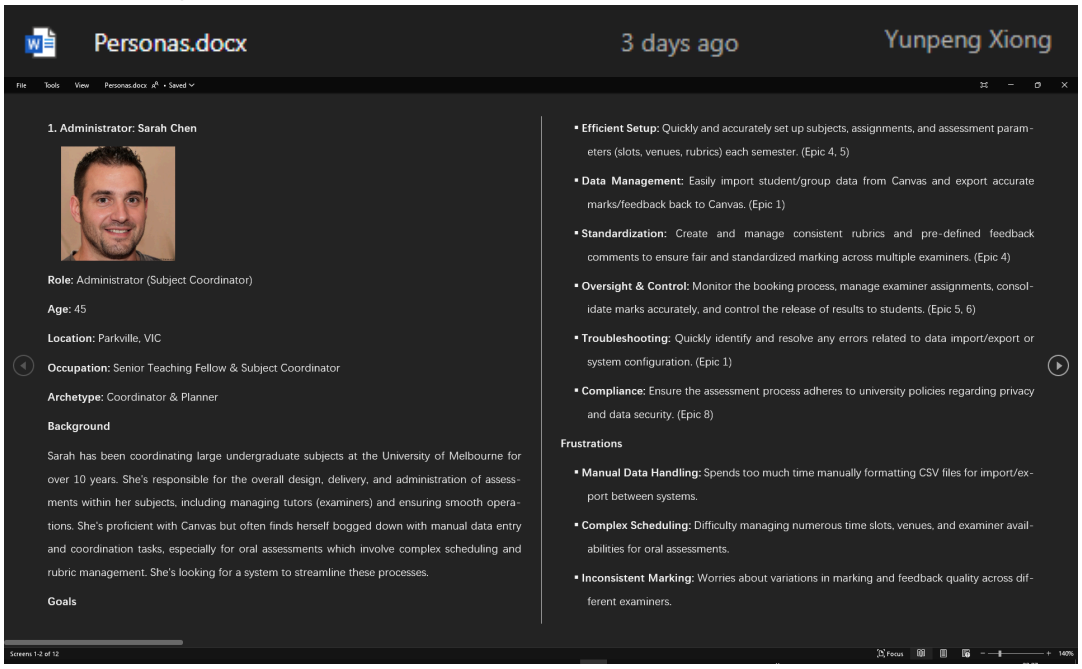

Q1

> What you have done for the project during the week and what you have achieved/delivered individually?

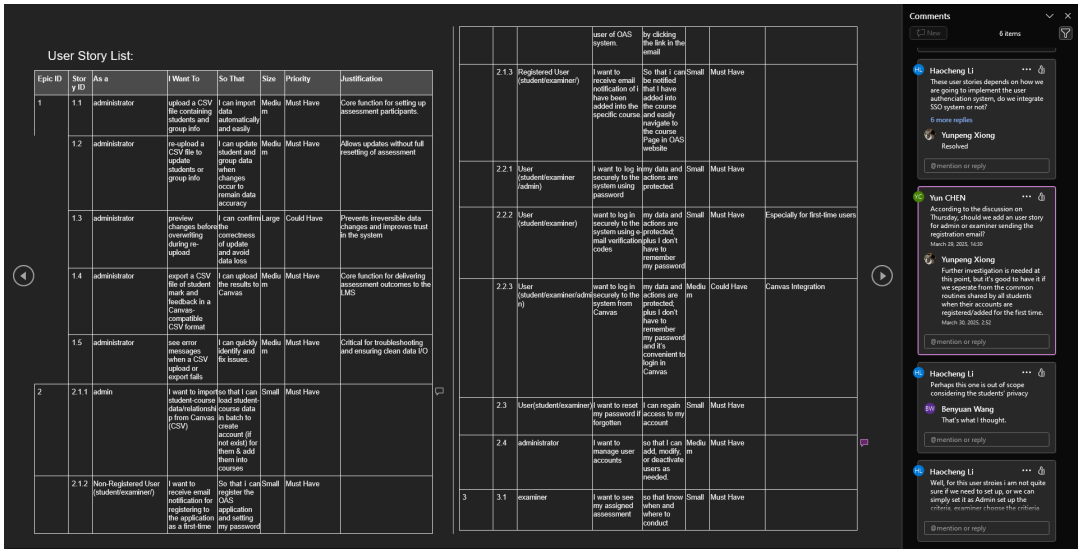

- What I've done for the project during the week:
  - Decide which flavor & how much of computing VMs we are going to apply:

  - Attending the meetings & participate in discussion for backend tech stack & architectures.
- Individually...
  - Draft and complete Personas:

- Resolve the method we are going to use for user identification instead of SSO during both in person meeting & online (evidence shows only User Story modifications online):

- Setting up mock environment for testing:

Q2

> List 2-3 key issues you may have encountered and give reasons if applicable.

- Deciding how we would facilitate user identification if we don't have SSO - this would involves Canvas . I learnt from our PO that the client confirms the CSV from Canvas would have Student ID & Email Address within them, these can do the trick if we want to verify the users (UniMelb students?) & register them (as primary key).

Q3

> What you plan to do for the project next week individually?

- I plan to do the following for the project next week:
  - Design the backend architecture with backend team.
  - Complete the documentation works if needed.
  - Add development setups to GitHub wiki or other team spaces.
  - Setup the university VMs if they arrive.
  - Setup rules for our git workflow (we can't enforce them because we are not the owner of the repo unfortunately)
