Yunpeng Xiong Weekly Report (Semester 2, Week 3)

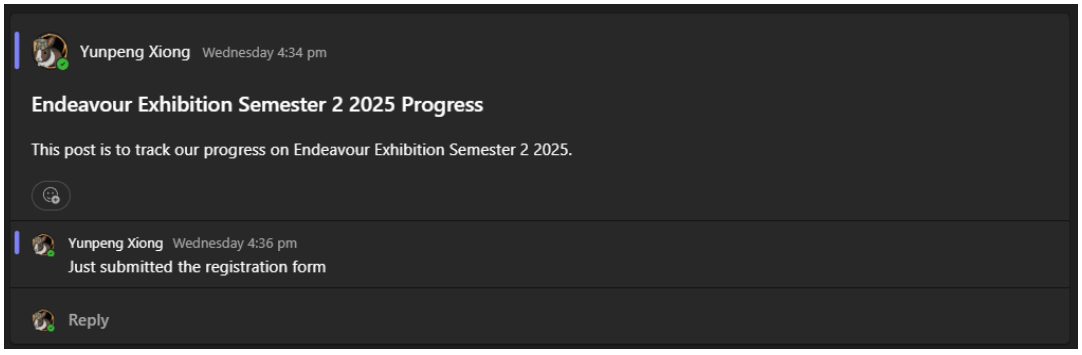

> Yunpeng Xiong 1513076

Q1

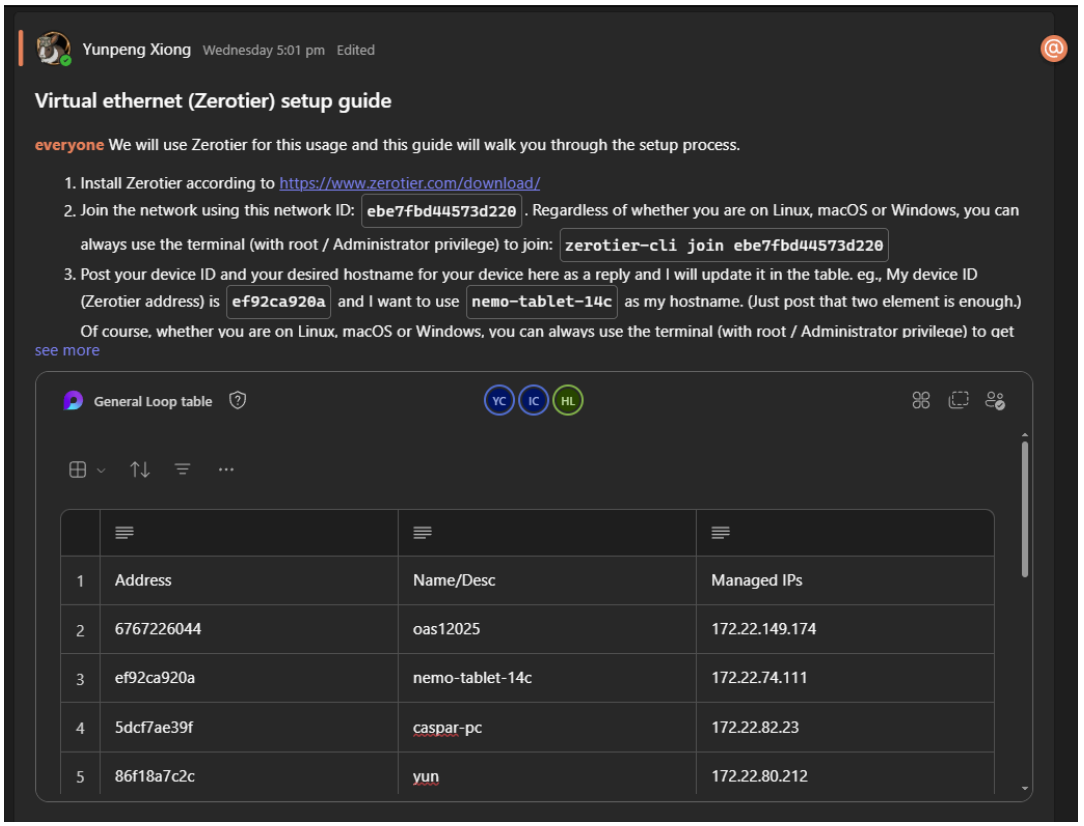

> What you have done for the project during the week and what you have achieved/delivered individually?

- What I've done for the project during the week:
  - Attending weekly mentor and team meetings. (~2 hours)
  - Research & register us all for Endeavor Exhibition 2025 (~2 + 2 hours)

- Individually...
  - Setup virtual ethernet for the whole team and provide setup guide & technical support (~6 hours)

Yunpeng Xiong Wednesday 5:01 pm Edited

Virtual ethernet (Zerotier) setup guide

everyone We will use Zerotier for this usage and this guide will walk you through the setup process.

1. Install Zerotier according to https://www.zerotier.com/download/
2. Join the network using this network ID: `ebe7fbd44573d220` . Regardless of whether you are on Linux, macOS or Windows, you can always use the terminal (with root / Administrator privilege) to join: `zerotier-cli join ebe7fbd44573d220`
3. Post your device ID and your desired hostname for your device here as a reply and I will update it in the table. eg., My device ID (Zerotier address) is `ef92ca920a` and I want to use `nemo-tablet-14c` as my hostname. (Just post that two element is enough.)

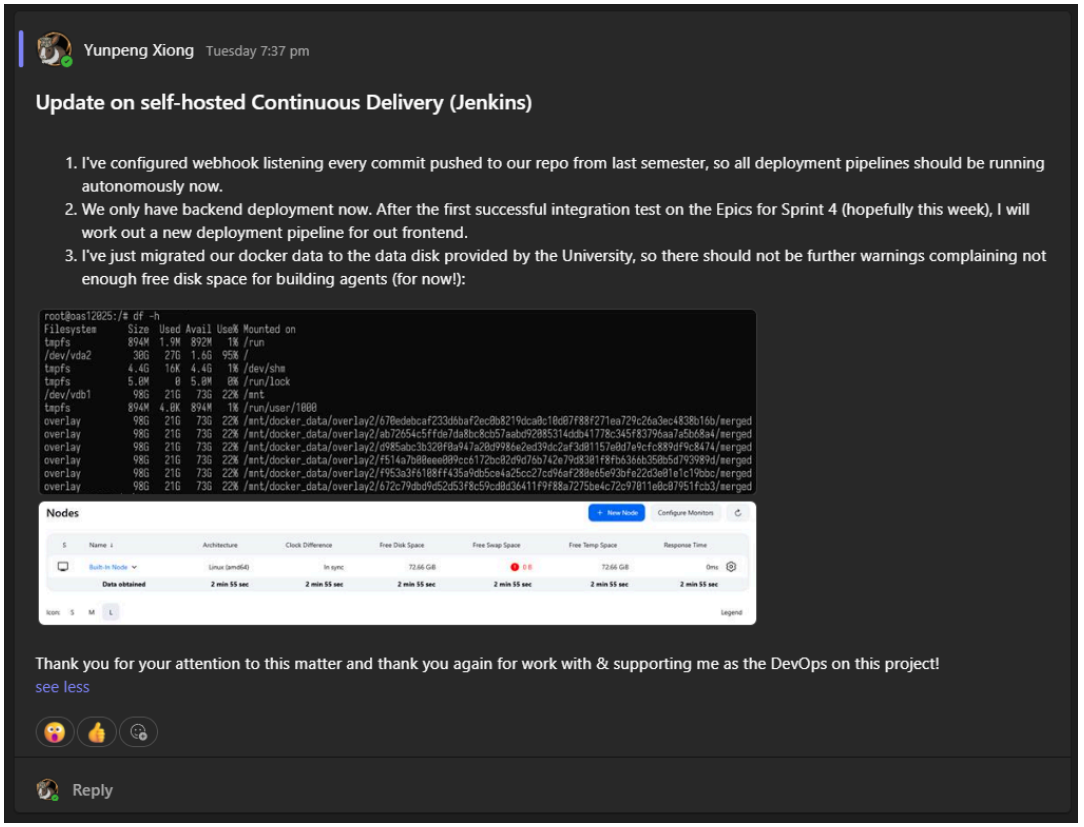

Of course, whether you are on Linux, macOS or Windows, you can always use the terminal (with root / Administrator privilege) to get

General Loop table

1	Address	Name/Desc	Managed IPs
2	6767226044	oas12025	172.22.149.174
3	ef92ca920a	nemo-tablet-14c	172.22.74.111
4	5dcf7ae39f	caspar-pc	172.22.82.23
5	86f18a7c2c	yun	172.22.80.212

- Migrate Jenkins (and whole docker data) to Uni-provided data disk on the VM so that the space won't run out (shortly):

Yunpeng Xiong Tuesday 7:37 pm

Update on self-hosted Continuous Delivery (Jenkins)

1. I've configured webhook listening every commit pushed to our repo from last semester, so all deployment pipelines should be running autonomously now.
2. We only have backend deployment now. After the first successful integration test on the Epics for Sprint 4 (hopefully this week), I will work out a new deployment pipeline for out frontend.
3. I've just migrated our docker data to the data disk provided by the University, so there should not be further warnings complaining not enough free disk space for building agents (for now!):

```

Reply

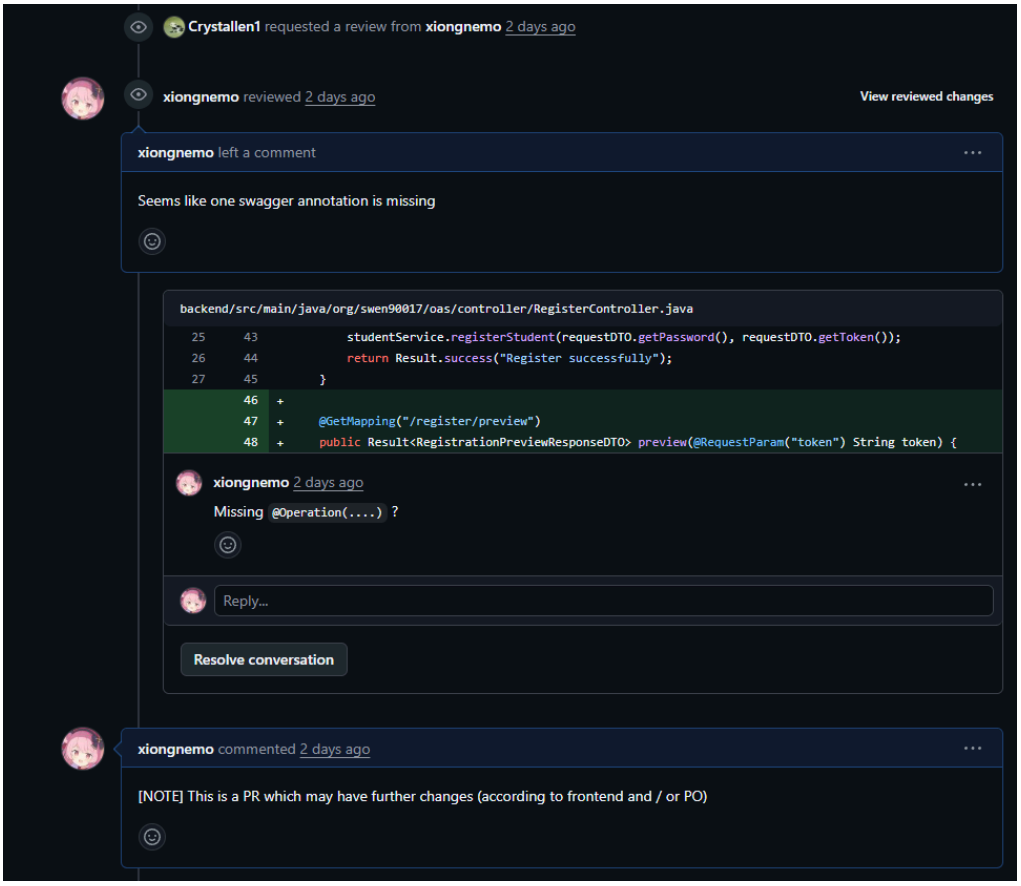

- Assign backend people for their tasks on Sprint 5 this semester on Kanban (GitHub Project's board) (~1 hour)

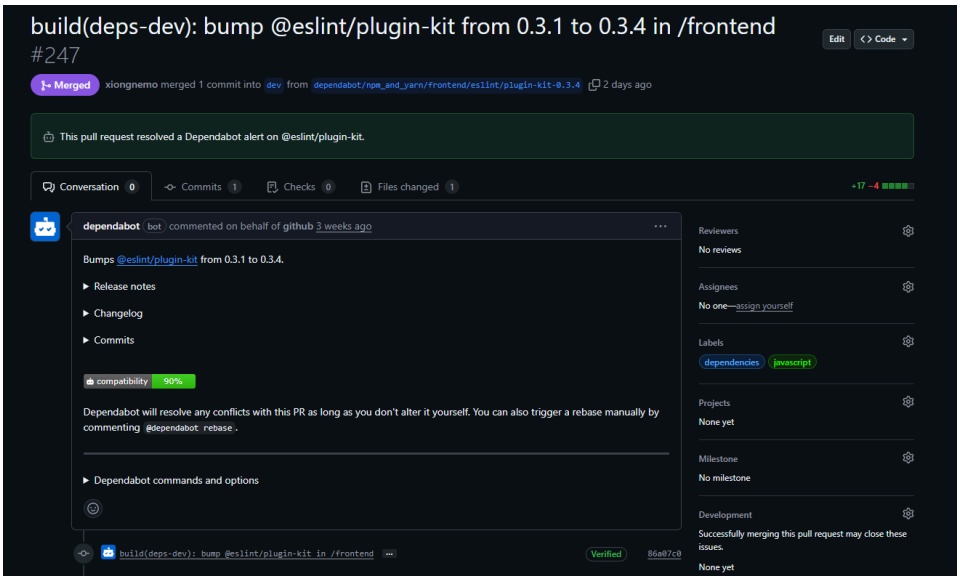

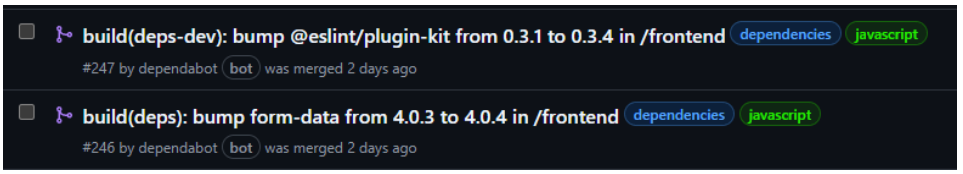

- Manage GitHub:
  - Manage weekly report (~1 hour)
  - Review PRs (~3 hours):

- Merge dependabot alerts: (~1 hour)

Q2

> List 2-3 key issues you may have encountered and give reasons if applicable.

- Assigning backend people to specific tasks seems difficult as our original plan for the team is quite outdated now (some epics were too large, some people was in charge of some parts so it's better to let them still do the same regardless of the actual workload of other tasks compared to the ability of the people), which will be fixed in upcoming Sprint 5 as we will be having a fresh start.

Q3

> What you plan to do for the project next week individually?

- I plan to do the following for the project next week:
  - Assist Ian in refactoring the wiki.
  - Continuous technical support for the whole team.
  - Deploy frontend.
