Week12 Report - Yun Chen

name: Yun Chen
student id: 1412174
Date: 1/6/2025

1. Work Completed

This week, I focused on enhancing the system's student-group management and optimizing the student import process. Firstly, I implemented support for batch importing group data from CSV. This included creating the sys_group table and Group entity to store group metadata, along with a sys_student_group mapping table to support many-to-many relationships between students and groups. I developed the corresponding GroupMapper and SysStudentGroupMapper with batch insert capabilities, and integrated the logic using GroupCSVRequestDTO to associate students with groups automatically based on their loginId and canvasGroupId.

In parallel, I refactored the student import and activation email workflow. To improve performance, I replaced individual student ID queries with a single batch IN clause query. I also updated the logic to use sisLoginId—a more accurate representation of the university's login format—for constructing email addresses. Additionally, I added a sisLoginId field to SysStudent and an email field to SysUser in line with user story 2.1.2 requirements. To ensure consistency and fault tolerance, I introduced a TransactionUtil utility to wrap student import and email dispatch into a single transaction, preventing data inconsistency from partial failures. - Attended group meetings to discuss team presentation (1h)

total 5h

2. Issues Encountered

no this week

3. Next Week Plan

- **Implement frontend-backend integration for one feature(login maybe).**
