Q1: What have you done for the project during the week and what have you achieved/delivered individually?

What I have done this week (total 8h):

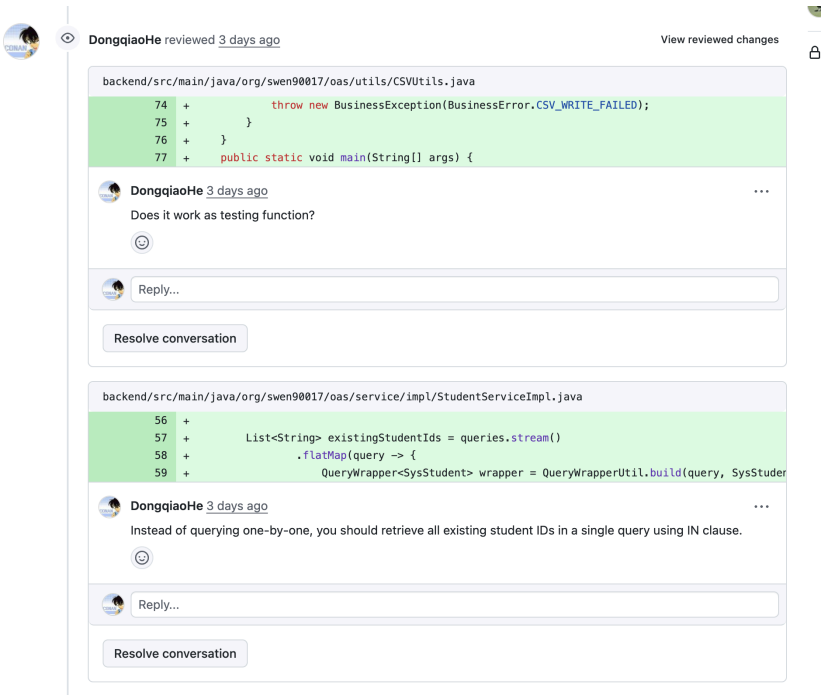

- (3h) Prepared the *Team Presentation* slides (Task Completed section), summarizing accomplishments across all three sprints. I communicated actively with Tianyun to refine the content and ensure alignment with our team's overall messaging.

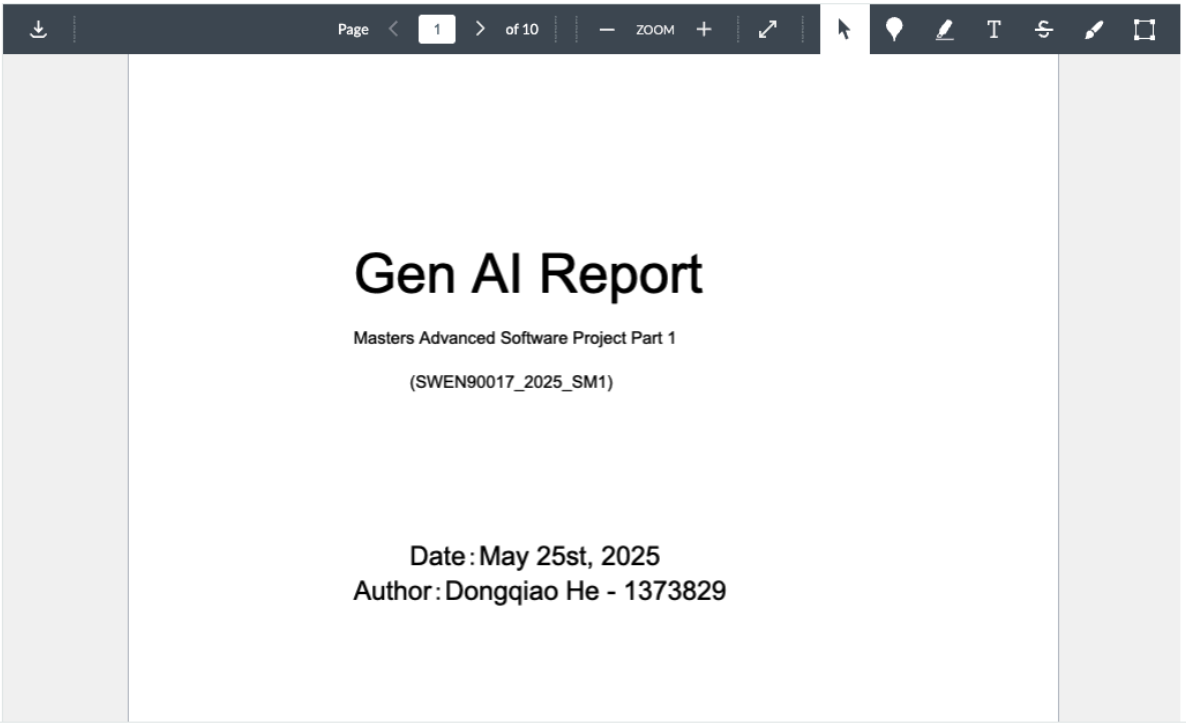

- (2h) Participated in two *team meetings* to discuss key presentation details, structure, and content allocation for the demo.

- (1h) Conducted a *code review* and provided feedback on avoiding repeated database queries inside loops, which would improve performance and scalability.

https://github.com/SWEN90017-2025-SM1/OAS-web-based-oral-assessments/pull/230

- (8h) Wrote a *Generative AI report* of over 4000 words, analyzing current trends, applications, and potential impacts.

What I have achieved/delivered individually:

- A clear and structured summary of our sprint progress for inclusion in the team presentation.

- Valuable contributions to team planning and coordination through active participation in meetings.

- Improved system performance by identifying a potential inefficiency during code review.

- A comprehensive technical report on Generative AI, contributing to our broader project understanding and documentation.

Q2: List 2–3 key issues you encountered and give reasons if applicable

- Clarifying the scope of presentation content: Initially uncertain which parts of the sprint summaries should be highlighted.
  Solution: Proactively discussed with Tianyun to clarify expectations and align the presentation with team goals.

- Code review performance concerns: Identified a risk of performance degradation due to redundant DB queries in a loop.
  Solution: Provided specific suggestions for refactoring to reduce query frequency.

Q3: What do you plan to do for the project next week individually?

- Finalize and rehearse my section of the team presentation.
- Assist teammates in debugging deployment or demo-related issues.
- Help refine final documentation or readme files if needed.
