Use Case Description

UC01: User Register

Actors: Super Administrator, Administrator

Description: Super administrators exist by default. Super Administrator creates administrator accounts. Administrators add student accounts via CSV for each assignment and manually add examiner accounts by email. No self-registration is allowed.

Preconditions: Administrators do not have accounts. Examiners do not have accounts. Users do not have accounts or are not enrolled in any course.

Postconditions: Administrators, students and examiners accounts are created.

Main Flow:

a. Super Administrator creates administrator account with username and password.
b. Administrator uploads student list (CSV) for each assignment.
c. Administrator manually adds Examiner with name and email.
d. System sends notification email.

Alternate Flow:

If the user exists but not in the assignment, only Only they was registered for the new assignment notification is sent.

If email fails, admin can manually resend.

Exceptions:

Invalid CSV format, upload failure, invalid email, delivery failure

UC02: User Login

Actors: Super Administrator, Administrator, Examiner, Student

Description: Students and examiners log in with a verification code the first time and set a password for future logins. Administrators and super administrators log in with a predefined username and password.

Preconditions: Users are registered in the system

Postconditions: Users successfully log in or regain access

Main Flow:

Super/Admin log in using predefined credentials.

Examiner/Student logs in with verification code for the first time.

Password is set and used for future logins.

Examiner/Student logs in with password.

Alternate Flow:

Super forgot password

Examiner/Student forgot password – reset process initiated

Exceptions:

Login failure, expired code, disabled account

UC03: Book / Edit Slot

Actors: Student

Description: Students can view available time slots and book one for oral assessment. Editing or cancellation is allowed up to 24 hours in advance.

Preconditions: User is logged in and enrolled in a course

Postconditions: Booking is saved or updated

Main Flow:

Student views available slots

Selects and submits a booking

System records booking and sends confirmation

Exceptions:

Time conflict, duplicate booking, editing deadline exceeded

UC04: View Group Info & Schedule

Actors: Student

Description: Students can log in to view group members, appointment status, and marking status.

Preconditions: User is logged in and associated with a course

Postconditions: Group and schedule info is displayed

Main Flow:

Student logs into the system

Enters course page

Views group and schedule information

Exceptions:

Missing course data, sync failure

UC05: Receive Notifications

Actors: Student, Examiner

Description: The system automatically sends notifications for key events like booking, enrollment, reminders, and examiner claiming a slot.

Preconditions: User is involved in a relevant event

Postconditions: Notification is successfully delivered

Main Flow:

Notification triggered upon: booking created/updated/canceled, course enrollment, assessment reminders, examiner claims a slot

Exceptions:

Failed delivery, invalid email address

UC06: Claim Timeslot

Actors: Examiner, Administrator

Description: Examiners can view and claim available timeslots. Administrators can also assign examiners to specific slots.

Preconditions: Examiner account is active and associated with a course

Postconditions: Slot is claimed and updated in system

Main Flow:

Examiner logs in

Views available slots

Selects and claims a slot

Administrator can assign examiners to specific slots

Exceptions:

Slot conflict, slot already claimed, timeout

UC07: Submit Marks & Feedback

Actors: Examiner

Description: Examiners assess students or groups, submit marks and written feedback. System stores results and controls visibility.

Preconditions: Examiner has claimed a slot and students have booked

Postconditions: Marks and feedback are saved

Main Flow:

Examiner views appointment list

Selects student or group

Inputs marks and feedback

Submits the record

Exceptions:

Unsaved work, permission error, missing rubric

UC08: Export Marks and Feedback

Actors: System Administrator

Description: Administrator exports final marks and feedback as a CSV compatible with Canvas.

Preconditions: All assessments are completed

Postconditions: CSV file is generated and downloadable

Main Flow:

Admin logs in

Selects course and assessment

Exports CSV

Exceptions:

Incomplete data, format errors, access issues

UC09: Assessment Structure Configuration

Actors: Administrator, Examiner

Description: Admin configures semesters, assignments, rubrics, and assignment-level comment libraries. Admins can add/edit/delete comments. Examiners can only add comments. Examiners can fully manage their own per-student feedback.

Preconditions: Administrator is logged in and assignment is created

Postconditions: Structure and comment libraries are configured for use

Main Flow:

Admin sets academic periods (year, semester, subject)

Creates assignments (individual/group)

Defines marking rubrics and templates

Configures criteria and options

Creates comment library per assignment: Admins can add/edit/delete, Examiners can only add

Examiners can add/edit/delete their own feedback on students

Exceptions:

Invalid structure, permission error, save failure

UC10: Manage User Roles and Permissions

Actors: Super Administrator

Description: Super Admin creates or deletes administrator accounts.

Preconditions: Super Admin is logged in

Postconditions: Admin account is updated

Main Flow:

Create admin account with initial credentials

Delete or disable admin account

UC11: Configure Time Slots

Actors: Administrator

Description: Administrator sets the assessment time slot parameters including start time, duration, number per day, location, and examiner requirements.

Preconditions: Administrator is logged in

Postconditions: Time slot configuration saved

Main Flow:

Set slot start time, duration, and daily number of slots

Assign location and required number of examiners per slot

Assign examiners manually if needed
