Week 7 Progress Report

Dongqiao He 1373829

Task Accomplished

User Story 5.2 Implementation

- Successfully implemented backend functionality for "As a student (in a group assignment), I want to see my group members (for group assignments), so that I know who I am working with"
- Developed API endpoints to retrieve group member information with proper user authentication and authorization
- Added data validation to ensure students can only access their own group member details
- Implemented comprehensive error handling for edge cases including non-existent groups and unauthorized access attempts
- Conducted thorough testing to validate API response format and data accuracy (estimated 6-8 hours)

https://github.com/SWEN90017-2025-SM1/OAS-web-based-oral-assessments/commit/6a96a8057d32d03a82409582ffa3150769b83324

User Story 6.4 Implementation

- Completed backend development for "As a student, I want to be able to view my final marks and any associated feedback after they have been processed and released by the administrator, so that I can understand my performance"
- Created secure API endpoints for students to retrieve their finalized grades and feedback
- Implemented administrator release control mechanism to ensure grades are only visible after official publication
- Added filtering logic to display feedback based on assignment status and release permissions
- Integrated proper data formatting for frontend consumption and optimized query performance (estimated 6-8 hours)

https://github.com/SWEN90017-2025-SM1/OAS-web-based-oral-assessments/commit/560b361d34e82ef5e08126449d027850ef104853

Issues

- Waiting for updated API documentation for upcoming user stories, which may impact next week's development timeline

- Some minor dependency conflicts identified during testing that require coordination with other team members

Upcoming Week Objectives

New User Stories Development

- Begin implementation of next assigned user stories once API documentation becomes available
- Develop backend functionality following established coding standards and architectural patterns
- Ensure proper integration with existing database schema and business logic layers
