Week 7 Report

Tianyun Lei 1454701

What I Did This Week

- Integrated frontend Examiner module with backend ExaminerAssessmentController APIs
- Refactored pages to use page-level data fetching pattern with all API calls in page.jsx files
- Updated assessment and schedule services to connect with real backend endpoints
- Created data transformation utilities to handle frontend-backend format conversion
- Implemented unified error handling and loading states across Examiner components
- Applied React best practices including custom hooks, memo optimization, and component separation

GitHub: https://github.com/SWEN90017-2025-SM1/OAS-web-based-oral-assessments/tree/examiner-connect

Problems Encountered

- Data format mismatches between frontend expectations and backend DTO structures required extensive transformation layer
- Import path issues with new common components needed debugging during integration testing

Plans for Next Week

- Continue implementing remaining frontend features for other user roles
- Address any additional backend integration requirements based on testing feedback
