Use Case Descriptions

UC01: Register and Onboard Users

Actors: System Administrator, Student, Examiner

Description: The administrator uploads CSV files to create student and examiner accounts. The system sends registration emails and course enrollment notifications. Users set their password or log in with verification codes.

Preconditions: Users are not yet registered or enrolled in any course

Postconditions: User accounts are created and activated through email

Main Flow:

- Administrator uploads CSV data exported from Canvas
- System identifies unregistered users and creates accounts
- System sends registration links and enrollment notifications
- Users click the email link and set a password for first-time login

Alternate Flow:

User already exists but not in course---------only enrollment notification is sent

Email not delivered---------Administrator may manually resend

Exceptions: Invalid CSV format, upload errors, email delivery failures

UC02: Authenticate and Manage Accounts

Actors: System Administrator

Description: Users log in using password, email code(or Canvas). Administrators can manage accounts (activate, deactivate, reset).

Preconditions: Users are registered in the system

Postconditions: Users successfully log in or regain access

Main Flow:

- Users choose login method (password, email code, or Canvas)
- System verifies credentials and grants access

- Admin can update, reset, or disable user accounts

Alternate Flow:

User forgets password---------initiates reset process

First-time users may log in with verification code or via Canvas

Exceptions: Login failure, expired codes, disabled accounts, unsynced Canvas users

UC03: Book / Edit Slot

Actors: Student

Description: Students view available time slots and book one for oral assessment. Editing or canceling is allowed up to 24 hours in advance.

Preconditions: User is logged in and enrolled in a course

Postconditions: Booking is saved or updated

Main Flow:

- Student views available time slots
- Selects a slot and submits booking
- System records booking and sends confirmation

Exceptions: Time conflict, duplicate booking, editing after the 24-hour deadline

UC04: View Group Info & Schedule

Actors: Student

Description: Students log in to view their group members, appointment status, and marking status.

Preconditions: User is logged in and associated with a course

Postconditions: Group and schedule information is displayed

Main Flow:

- Login
- Enter course

- View group and schedule info

Exceptions: No course data, sync issues

UC05: Receive Notifications

Actors: Student, Examiner

Description: System automatically sends notifications for key events such as booking, course enrollment, assessment reminders, etc.

Preconditions: User is involved in a relevant event

Postconditions: Notification successfully delivered

Main Flow:

System triggers notification after events:

1. Booking created/modified/canceled

2. Added to course

3. Assessment reminders

4. Examiner claims a timeslot

Exceptions: Failed delivery, invalid email address

UC06: Claim Timeslot

Actors: Examiner

Description: Examiners view available time slots and claim one to conduct assessments.

Preconditions: Examiner account is active and associated with a course

Postconditions: Timeslot is claimed and updated in the system

Main Flow:

- Login
- View open timeslots
- Select and claim

Exceptions: Concurrent claim conflict, timeslot already taken, timeout

UC07: Submit Marks & Feedback

Actors: Examiner

Description: Examiners assess assigned students or groups, submit marks and written feedback. System stores the result and enforces visibility controls.

Preconditions: Examiner has claimed a slot, students have booked

Postconditions: Marks and feedback saved

Main Flow:

- Examiner views appointment list
- Selects a student or group
- Inputs mark and feedback
- Submits the record

Exceptions: Unsaved work, permission error, missing rubric

UC08: Export Marks and Feedback

Actors: System Administrator

Description: Administrator exports final marks and feedback as a CSV file compatible with Canvas.

Preconditions: All assessments completed, feedback optional

Postconditions: CSV file is generated and available for download

Main Flow:

- Login
- Select course and assessment
- Export CSV

Exceptions: Incomplete data, format errors, access issues

UC09: Assessment Structure Configuration

Actors: System Administrator

Description: Administrators configure academic periods, assignments, marking rubrics, criteria structures, marking options, and predefined comments to standardize assessments and facilitate examiner grading.

Preconditions: Administrator is logged in with proper privileges

Postconditions: Assessment structure and rubrics are set and available for examiners

Main Flow:

- Administrator sets up academic periods (year, semester, subject)
- Administrator creates assignments (individual/group)
- Administrator defines customizable marking rubrics and feedback templates
- Administrator configures multiple criteria and sub-criteria structures
- Administrator defines various marking options per criterion
- Administrator creates/modifies predefined comments for examiners to use

Exceptions: Invalid rubric structure, permission issues, data saving errors
