Github branch:SWEN90017-2025-SM1/OAS-web-based-oral-assessments at frontend-integration-results

- **Completed full reconstruction and backend integration of Examiner Assessment pages**
  - Restructured assessment flow from single page to 3-level navigation:
    - Assignment List → Session List → Assessment List → Marking Page
  - Integrated real backend APIs, replacing all mock data

- **Fixed major API integration issues**
  - Resolved JSON parsing errors for fields like `rubricMetaSnapshot`, `rubricsInfoSnapshot`, `scoresJson`
  - Fixed field mapping mismatches (`startDate`/`endDate` vs `startTime`/`endTime`)
  - Resolved 400 errors (missing parameters, invalid payload structures)
  - Implemented complex data transformation logic (backend `scores` ↔ frontend `entities`)
- **Enhanced Assessment Marking page UI and interactions**
  - Optimized Rubric Table UI based on `scaleType`:
    - Points type: 0-100 input field only, hidden level selection
    - Descriptive type: level selection buttons only, auto-calculated scores
  - Fixed Continue Assessment data loading issues

    - Implemented complete Save Draft and Submit Assessment workflows
- **Resolved React SSR/CSR related issues**
    - Fixed Hydration errors and component rendering logic
    - Resolved function references and props passing issues

Time allocated: 16 hours (6h API integration, 4h data transformation, 3h UI optimization, 3h bug fixes)

Key Issues Encountered

1. **Complex data structure transformation** - Backend `scores` array vs frontend `entities` structure mismatch
2. **Inconsistent API response formats** - Different APIs returning varied data structures
3. **ScaleType conditional rendering** - Points and Descriptive types requiring different UI logic
4. **SessionContext circular reference** - Dependency issues during context construction
5. **Level ID mapping complexity** - Inconsistent `levelId` representation across APIs

Technical Solutions Implemented

- **Complete API service layer** (`examinerAssessmentService.real.js`, `examinerSessionService.js`)
- **Smart data transformation functions** for backend ↔ frontend format conversion
- **Enhanced RubricTable component** with dynamic `scaleType`-based rendering
- **Robust error handling mechanisms** with fallback logic and user-friendly notifications
- **Complete assessment state management** supporting Draft saves, Continue Assessment, Final Submit

Plan for Next Week

- **Performance optimization** for Assessment pages (data caching, concurrent API handling)
- **Results page integration** - My Marking History backend API and filtering features
- **UX improvements** - auto-save functionality, bulk operations, mobile responsiveness
