Q1: What have you done for the project during the week and what have you achieved/delivered individually?

What I have done this week:

- Initiated planning for the deployment strategy, considering multiple environments and future scalability.
    - https://unimelbcloud.sharepoint.com/:w:/r/teams/SWEN90017182025/_layouts/15/Doc2.aspx?action=edit&sourcedoc=%7B2e77df50-6638-416f-ba21-6f8684930585%7D&wdOrigin=TEAMS-MAGLEV.teamsSdk_ns.rwc&wdExp=TEAMS-TREATMENT&wdhostclicktime=1743941152535&web=1
- Attended meetings with the mentor and teammates to align on project goals and clarify task allocation.
    - https://github.com/SWEN90017-2025-SM1/OAS-web-based-oral-assessments/blob/main/Docs/Meetings/Week%205/Week%205%20TeamMeeting%2005.04.2025.md
- Actively participated in backend technical selection discussions.

Mybatis-Plus

Introduction:

MyBatis-Plus is an enhancement tool built on top of MyBatis. It offers a wide range of automated CRUD operations, code generators, pagination plugins, and more.

Why we choose:

- Retains the flexibility of MyBatis while significantly reducing boilerplate code
- Easy to learn, supports writing query statements using lambda expressions to avoid hardcoding
- Well-developed plugin system with support for pagination queries

What I have achieved/delivered individually:

- Led discussions on deployment planning, proposing a multi-environment setup (testing and production) and containerized deployment using Docker and Kubernetes.
- Identified early infrastructure needs to ensure deployment is considered from the start and integrated into overall development planning.

Q2: List 2–3 key issues you may have encountered and give reasons if applicable.

- The exact system configuration for deployment is still undefined. Further investigation is required to determine the most suitable hosting environment (e.g., cloud provider,

container orchestration tools), which will influence architectural decisions.

- It seems that GitHub webhook access is not enabled on the university's network or GitHub organization. As a result, we may need to trigger deployment manually through Jenkins or similar tools, which adds complexity to CI/CD automation.

Q3: What do you plan to do for the project next week individually?

Plans for next week:

- Continue developing the deployment strategy, including research on hosting platforms (e.g., AWS, Heroku), container orchestration (Kubernetes), and CI/CD pipeline options (e.g., GitHub Actions).

- Set up a basic local development environment with deployment configurations to facilitate early testing.
- Attend regular meetings with the client, mentor, and team to keep all aspects of deployment and development aligned.
