# Weekly Report - Week 5

Name: Yukun Fu
Date: August 31, 2025

## Tasks Completed This Week

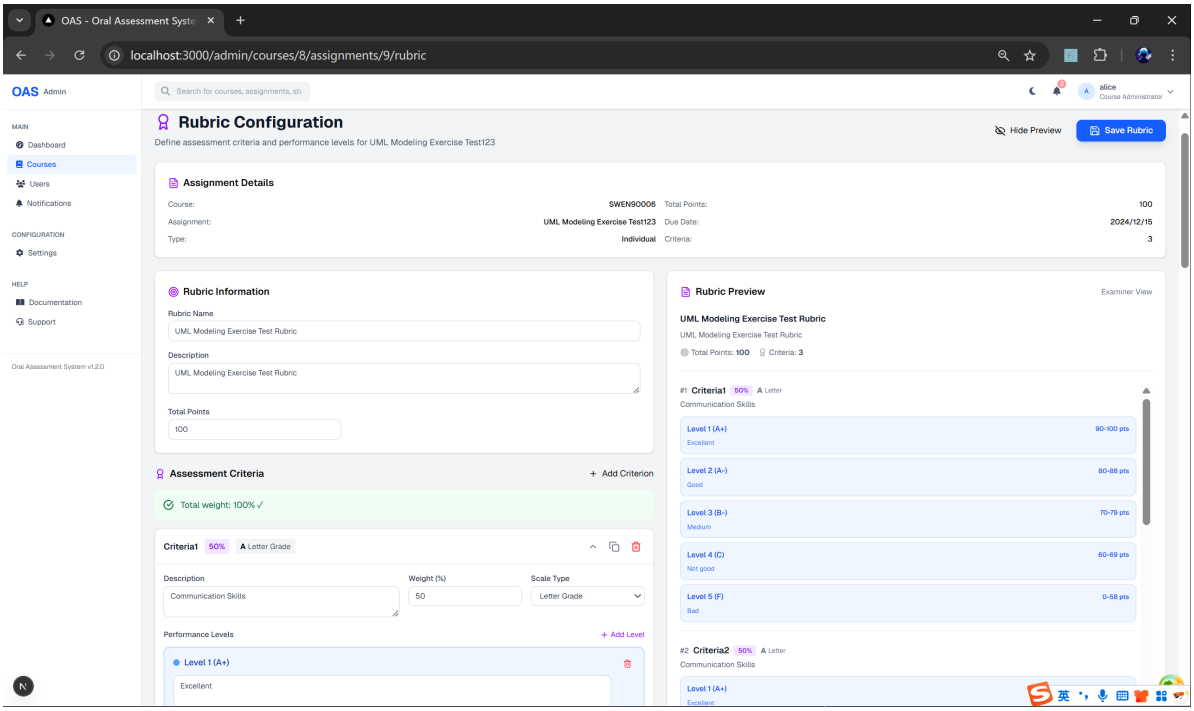

Rubric System Bug Fixes & UI/UX Improvements:

Kanban links:

- Issue #60 — Fully customizable marking rubrics - Bug fixes
- Issue #61 — Multiple criteria and hierarchical sub-criteria - UI improvements
- Issue #62 — Customizable performance levels per criterion - Visual standardization

Github link: frontend-bugfix

### Key Fixes Implemented:

- **Performance Levels**: Unified all levels to use consistent light blue color scheme, removed color picker
- **Data Model**: Consolidated level fields to use only `description` field (removed separate name/title)
- **Auto-naming**: Implemented automatic criteria naming (`Criteria1`, `Criteria2`, duplicates as `Criteria1 (Copy)`)
- **UI Consistency**: Fixed runtime error `currentColor is not defined`, synchronized preview with editing interface
- **Backend Integration**: Updated data mapping to handle simplified structure, maintained backward compatibility

## Time Allocated: 10 hours

- 2h analyzing existing bugs and inconsistencies
- 4h implementing fixes (color standardization, field consolidation, auto-naming)
- 2h fixing runtime errors and UI synchronization
- 2h code cleanup and optimization

## Key Issues Encountered

1. **Runtime Error**: Variable naming inconsistency (`currentColor is not defined`)
2. **UI Mismatch**: Preview panel format didn't match editing interface
3. **Data Mapping**: Backend expected separate title/description fields vs simplified frontend structure

**Resolutions:**

- Standardized variable naming and unified level display components
- Updated backend mapping layer for backward compatibility
- Established consistent blue color design system

## Plan for Next Week

**Student Flow Development:**

- Implement student assessment interface pages
- Create student rubric view (read-only) with performance indicators
- Build responsive design for mobile/tablet access

**Integration & Testing:**

- Integrate student authentication and role-based access
- Test end-to-end flow from rubric creation to student assessment
- Performance testing with larger datasets
